

### **Postdoctoral and Research Assistant positions in Structural Neuroscience**

Structural Neuroscience is the science of studying structure of the Central Nervous System using different experimental methods. A wide range of techniques such as light and confocal microscopy, immunohistochemistry, and molecular biology are used to study brain structure from molecular level to gross anatomy.

We require researchers with MSc or PhD degree in Neuroscience or related disciplines with experience in neuroanatomy, immunohistochemistry, molecular biology or related subjects to expand its research profile. The postdoctoral position will be dedicated to the study of neurological disorders using cellular and molecular methods.

The candidate is expected to be highly motivated, knowledgeable and experienced in aforementioned disciplines and have a good command of written scientific English.

Further training in advanced experimental techniques will be provided if necessary. Remuneration will be provided according to the candidate academic level (RA or Postdoc).

The position is collaboration between IPM and Shahid Beheshti University initially for 1 year, extendable upon mutual agreement.
